← 282 mm →
MAX DECOMPRESSION

← 223 mm →
MAX COMPRESSION

$$\Delta L \approx 59 \text{ mm}$$

$$k_s = 0.57 \frac{\text{N}}{\text{cm}}$$

$$F_{s, \text{TOT}} = k_s \Delta L$$

$$= 0.57 \frac{\text{N}}{\text{cm}} \cdot 5.9 \text{ cm}$$

$$= 3.4 \text{ N}$$

$$F_{s, \text{MOTOR}} = \frac{F_{s, \text{TOT}}}{2} = 1.7 \text{ N}$$

IF STALLED AT END

$$T_m = F_{s, \text{MOTOR}} \cdot r_p$$

$$= 1.7 \text{ N} \cdot 0.6 \text{ cm}$$

$$= 1.02 \text{ N-cm}$$

$$\Rightarrow 1.02 \text{ N-cm} \cdot \frac{1}{9.81 \text{ m/s}^2} = 0.10 \text{ kg-cm}$$

DC MOTOR UNITS

HARD TO GO MUCH SMALLER THAN THIS BUT WOULD

ROBOT CAN DO 0.3 cm/s CURRENTLY BASED ON 1.56 cm/s TRANSLATION SPEED

FOR 1 cm/s COMPRESSION

$$\Delta L = 5.9 \text{ cm}$$

$$r_p = 0.6 \text{ cm}$$

$$v = \frac{1 \text{ cm/s}}{2} = 0.5 \text{ cm/s} \quad \leftarrow 2 \text{ MOTORS}$$

$$\omega_m = \frac{v}{r_p} = \frac{0.5 \text{ cm/s}}{0.6 \text{ cm}} = 0.83 \frac{\text{rad}}{\text{s}}$$

$$= 0.83 \frac{\text{rad}}{\text{s}} \cdot \frac{1 \text{ rev}}{2\pi \text{ rad}} \cdot \frac{60 \text{ s}}{1 \text{ min}} \cdot \frac{60 \text{ min}}{1 \text{ hr}}$$

$$= 7.93 \text{ rpm}$$
